

Sub B³⁷
--36. A container with a hinged lid comprising:

a container body having an upper wall with an opening defined therein, a recessed portion along an edge of the opening of the upper wall, the recessed portion forming a plane parallel and below the upper wall, a side wall integral with and extending perpendicularly from the upper wall, and a bottom wall covering a plane defined by extended edges of the side wall;

a¹
a hinged lid pivotally attached to the side wall, the lid obstructing at least one edge of the opening of the upper wall, the lid positionable to cover the opening of the upper wall;

an elastic biasing means between the hinged lid and the body, whereby the biasing means urges the lid away from the opening of the upper wall into an open position;

locking means on a free edge of the hinged lid; and

an operating device having a vertical wall attached to the recessed portion, the vertical wall rising toward the upper wall, a horizontal strip attached to the vertical wall, the strip extending away from the body, a latching part on a side of the vertical wall facing the interior of the container, the latching part for engaging the locking part, whereby the latching part releases the locking part when the strip is urged towards the plane

a' formed by recessed portion, thereby moving the vertical wall and the latching part away from the locking part, and releasing the lid.--
